TOUCH CLERK GROUP PERMISSIONS
SERVER TOOLS

OPTIONS	PERMISSIONS WITH OPTION SELECTED ✔
SERVER TOOLS	A control on whether any Server Tools listed below can be accessed by the Clerk Group.
Back Ofice Price Change	Allows Clerks to change the pricing of Product Records in the Back Office database from the POS Terminal (Only possible if a direct SQL connection is configured). Else, ability to temporarily change the pricing of Product Records locally at the POS Terminal if the applicable Function Key is added to the Keyboard design.
Backup Settings to Server	Allows Clerks to manually backup the Terminal Settings of a POS Terminal and send to the server. Terminal Settings are backed up automatically when a auto-reboot is triggered/configured within the POS Terminal settings.
Change Terminal Location	Allows Clerks to change the Location/Outlet a POS Terminal is assigned too, meaning all revenue/stock movements from that point will be recorded under the new Location, and any Terminal Settings managed through Back Office for the Location will be sent down to the POS Terminal and take effect.
Resend Sales Files	Allows Clerks to send previously finalised/processed sales through to the server again. Only really required in a support or disaster recovery situation. If the server detects it already has a sale in the Back Office database, it'll ignore the sale and not duplicate it.
Restore Settings from Server	Allows Clerks to restore Terminal Settings for the POS Terminal from the server. (Useful when new hardware is taking over a previously assiged Terminal ID).
